FAILED

Detailed Execution Log

Dashboard Homepage & Overview Initialization Simulates a user landing on the main dashboard URL. Verifies that the initial load completes successfully, no blank screens occur, and the default 'Overview' tab is automatically rendered with live data visualizations.	PASSED
Main Navigation & Component Routing Sequentially clicks through every major tab (Overview, BIOPOD, Biodex, AI Forecast, Athlete, Compare, Upload PDF) to verify that internal JS routing properly switches components and removes hidden classes without throwing exceptions.	PASSED
Athlete API Data Fetch & Dropdown Population	PASSED

Navigates to the Athlete Profile tab and waits for the asynchronous API fetch to complete. Validates that the backend successfully returns athlete records and populates the dropdown select element.
